

Licopodio / Ital Seal / Graphites

Licopodio

LCM "Licopodio" is a pink powder, strongly water repellent, it is used in non ferrous and cast iron foundries as a parting agent. It has to be distributed uniformly in the patterns and thanks to its repulsive effect on the water assures a perfect separation between mold preparation and patterns

Ital Seal

Mix of Refractory and natural binders made in stripes really useful, when applied on the shapes, to avoid losses and infiltrations of metal in phase of tap. ITAL SEAL does not contain asbestos.

graphites

Amorphous (C 65/70%)

Dispersed in water with right binder and distributed on the core and mould surface, improves the refractory property and the surface finishing..

Silver (C>90%) Dispersed on the surface of green moulds for increasing cast superficial finishing qualities.
