DELLITE® 72T

Dellite[®] 72T is a nanoclay deriving from a naturally occurring montmorillonite especially purified and modified with an stechiometric content of quaternary ammonium salt (dimethyl dihydrogenated tallow ammonium). Dellite[®] 72T is an additive for polymer application, used to improve various physical and thermo-mechanical properties.

Applications

- Polyolefins
- Polyester
- Polystyrene
- Ethylene Vinyl Acetate
- Polyamides
- Epoxy and acrylic resins
- Rubbers and Elastomers
- ()

Advantages of Dellite® 72T in Polymeric Systems

- Oxygen, CO₂ and water vapour barrier
- Thermal stability
- Stiffness
- Melt fracture reduction
- Solvent/Chemical resistance
- Weight reduction
- Fiberglas reduction
- Rheology control
- UV transmission
- Flame retardant and Antidropping
- (...)

Incorporation

Thermoplastic Systems

According to the application the incorporation of Dellite[®] 72T into a thermoplastic system is usually carried out as follows:

- Adding up to 50% of Dellite[®] 72T in a masterbatch and diluting the master in the final compound
- b) Adding directly the Dellite® 72T to the compound.

• Thermoset Systems

The incorporation of Dellite[®] 72T into a thermoset system may be obtained using the following methods:

- a) Mixing the desired amount of Dellite[®] with the resin. Then the curing agent and other additives may be added.
- b) Mixing the desired amount of Dellite[®] with the curing agent. Then the resin and other additives may be added.
- c) Resin, curing agent and additives are mixed and then Dellite® 72T is added.

Dosage

The typical levels of use are included in the range 1-5% based on total system weight.

Storage Stability and Packing

Product does not deteriorate in a significant way in a twelve months period.

Storage is advisable in a dry sheltered place in closed bags.

Packing is 25kg net paper bags on wood pallets of 1200kg each. Different packing is possible if required.
