Laviosa Cosmetics

Natural mineral solutions
for modern cosmetics.
Discover high-performance
natural rheology modifiers.

Over 100 years of experience

Made in Italy

Laviosa industrial activities consist of research and processing of bentonites and other clay minerals into high value-added products and solutions.

Our main expertise and strengths lie in the control of raw materials, process technology, production around the world, and product application, in addition to logistics services and a customer-oriented approach.

Laviosa Cosmetics

The products from the **LAVIOSA® ARGIMEL** and **COSMOCLAY** lines are effective rheology modifiers and good texturisers, which makes them suitable for the preparation of W/O emulsions, creams, high-performance gels, and silicone-based emulsions. They can also be used as co-emulsifiers. These products are commonly used in nail polishes, foundations, lip glosses, lipsticks, mascaras, and eyeliners. The products in the **COSMOCLAY** line allow for the creation of gel structures and suspensions with innovative textures, providing thixotropic properties. They help to

establish the product's three-dimensional structure, facilitating the incorporation of different elements and fillers. This line offers all-natural alternatives to acrylic and xanthan and guar gum-based rheology modifiers. The products are commonly used in gels, creams and emulgels without surfactants; detergents; hair care products; and other solutions where the formulas require a thickening and anti-settling ingredient. The **COSMOCLAY** line also includes peloid bentonite products that can be used for facial treatments and mud therapy applications.

| PRODUCT | INCI Name | Antiperspirants | Deo | Face Mask | Cream | Conditioner | Shampoo | Lipstick | Lip-gloss | Nail Polish | Make-up | Balm | Mud Therapy | Body Lotion | Sun protection |
